

FLOOD HAZARD INFORMATION

OTHER FEATURES	8	Coastal Transect
SPECIAL FLOOD HAZARD AREAS		Special Flood Hazard Area (SFHA)
		Regulatory Floodway
OTHER AREAS OF FLOOD HAZARD		0.2% Annual Chance Flood Hazard
CHANGES SINCE LAST FIRM		Velocity Zone Increase
		SFHA Increase
		Velocity Zone Decrease
		SFHA Decrease
		Non SFHA Increase
		Non SFHA Decrease
WAVE HEIGHT GRID		>= 3 Feet
		1 - 3 Feet
		<= 1 Feet

NOTES TO USERS

For information and questions about this map, available products associated with this Flood Risk Map, please call the FEMA Regional Service Center at 1-617-574-4402.

The information on this map is for information purposes only and is not subject to regulations. The information represents the Flood Risk Products and is intended for use in Mitigation and Planning.

Base map information shown on this map was derived from digital orthophotography provided by Massachusetts Geographic Information System (MassGIS). This information was created from 30-cm pixel resolution photography dated April 2008.

Flood Zone Definitions:
Special Flood Hazard Area (SFHA) - The land area covered by the floodwaters of the base flood is the Special Flood Hazard Area (SFHA) on NFIP maps. The SFHA is the area where the NFIP's floodplain management regulations must be enforced and the area where the mandatory purchase of flood insurance applies. The SFHA includes Zones A, AO, AH, A1-30, AE, A99, AR, AR1-30, AR/AE, AR/AO, AR/AH, AR/A, V, V1-30, VE, and V Shaded X - Moderate flood hazard areas, labeled Zone X on the SFHA (X shaded) are also shown on the FIRIM, and are the areas of the base flood and the 2-percent-annual-chance flood (or 100-year flood).
Unshaded X - The areas of minimal flood hazard, which are the areas outside the SFHA and higher than the elevation of the 0.2-percent-annual-chance flood, are labeled Zone C or Zone X (unshaded).

Risk Product Definitions:
Changes Since Last FIRM - The CSLF dataset identifies changes in the Special Flood Hazard Area (SFHA) and floodway boundary changes since the previous FIRM was developed. These datasets quantify land area increases and decreases to the SFHA and floodway, as well as areas where the flood zone designation has changed (e.g., Zone A to AE, AE to VF, shaded Zone X protected by levee to AE for de-accreted levees).

changed (e.g., Zone A to AE or VE, shaded Zone X protected by levee to AE or for de-accrued levees). Flood depth grid. The multi-frequency flood depth and analysis grids show depth—calculated as the difference (in feet) between the water surface elevation and the ground—and relies on the Water Surface Elevation Grid. Four grids will be delivered for riverine (non-leveed) areas for the standard flood frequencies (10-, 2-, 1-, and 0.2-percent-annual-chance). Coastal and levee areas only receive the 1-percent-annual-chance grid.
